PACOS — Outro Video Prompts (Kling & Google Omni / Veo)

The outro is **aspirational, not literal** — the *feeling* of a search that's working: calm control, momentum, a landed interview. ~30 seconds total.

Google Omni / Veo caps clips at 10 seconds, so the outro is written as **three independent 10-second segments** (O1–O3) that cut together cleanly. Kling can often do a single longer clip — a combined 30s prompt is given at the end for that path.

Consistency anchors (repeat in every prompt so the three segments match):

- Palette: warm off-white and slate, one **accent orange (#e84a2f)** highlight.
- Mood: confident, minimal, modern-editorial; soft natural light; shallow depth of field.
- No text, no logos, no readable UI, no faces of recognizable real people.
- Camera: slow, deliberate moves (dolly / push-in), 24fps cinematic, subtle grain.

Segment O1 · 0:00–0:10 — "The quiet operator"

Google Omni / Veo prompt:

```
Cinematic 10-second shot, 24fps, shallow depth of field, warm off-white and slate
color
palette with a single accent-orange highlight. A calm professional at a clean
minimal
desk near a large softly-lit window, seen over the shoulder, working with quiet
focus on
a laptop (screen not readable). Slow dolly push-in toward the laptop. Soft morning
light,
gentle lens grain, modern editorial mood. No text, no logos, no readable
interface.
```

Beat: stillness and control — "you, running the pipeline."

Segment O2 · 0:10–0:20 — "Momentum"

Google Omni / Veo prompt:

```
Cinematic 10-second shot, 24fps, same warm off-white and slate palette with
accent-orange
highlight, matching the previous shot's light and grain. Abstract visualization of
motion: soft glowing orange nodes connecting along thin lines across a clean pale
background, like a network of people lighting up one after another, flowing left
to
right. Elegant, minimal, weightless. Slow lateral camera drift. No text, no logos.
```

Beat: connections forming — discovery and outreach compounding.

Segment O3 · 0:20–0:30 — "The moment it pays off"

Google Omni / Veo prompt:

```
Cinematic 10-second shot, 24fps, warm off-white and slate palette with accent-
orange
highlight, matching prior shots. A professional stands and confidently opens a
laptop for
a video call in a bright minimal room, a subtle relieved smile, warm light rising.
Slow
push-in that settles to a calm hold, ending on soft orange bokeh. Hopeful,
understated,
premium. No text, no logos, no readable screen.
```

Beat: the interview lands — resolve on hope, hand off to the end card.

End card (add in edit, not AI-generated): on the final orange bokeh, fade in the PACOS wordmark + tagline **"Run your job search like a system."** + a call-to-action.

Kling — single 30-second prompt (if using Kling instead of Omni)

```
A 30-second cinematic sequence, 24fps, shallow depth of field, warm off-white and
slate
color palette with a single accent-orange highlight throughout, consistent soft
natural
light and subtle film grain, modern editorial premium mood. Beat 1 (0-10s): over-
the-
shoulder of a calm professional at a clean minimal desk by a large window, working
with
quiet focus on a laptop (screen not readable), slow dolly push-in. Beat 2 (10-
20s):
transition to an abstract minimal visualization — soft glowing orange nodes
connecting
along thin lines across a pale background, people lighting up one after another,
flowing
left to right, weightless. Beat 3 (20-30s): the professional stands and opens a
laptop
```

```
for a video call in a bright room with a subtle relieved smile, warm light rising,
slow
push-in settling on soft orange bokeh. No text, no logos, no readable interface,
no
recognizable real faces. Smooth, deliberate camera moves throughout.
```

Editing notes

- Keep O1→O2→O3 on the **same** light direction and grain so the cuts feel like one film.
- Music swells gently across the three segments and resolves on the end card.
- If a segment renders with any text/logo artifacts, regenerate — the end card is the *only* place text belongs.
- Total runtime target: intro 80s + outro 30s = **~1:50**. Trim S2 or O2 first if you need it under 90s.
