PACOS — Motion & Design Spec (title cards, lower-thirds, transitions)

So the intro (screen recording) and the outro (AI video) read as **one product**. These tokens are pulled from the app's own CSS so the video matches the UI exactly.

Color tokens (from the app)

Token	Hex	Use in video
Accent	`#e84a2f`	The one highlight color: click ripples, key underlines, the "OS" pulse, end-card CTA
Ink (dark)	`#0f172a` / near-black	Title-card backgrounds, lower-third bars
Off-white bg	`#f7f7f8` (stone-50-ish)	Safe title background; matches app canvas
Blue tag	soft indigo	Secondary chips only; use sparingly
Confidence green	`#0f6b38` on `#d9f2e4`	If showing the "verified vs predicted" idea

Rule: one accent only. Orange is the star; everything else is slate/ink/off-white.

Typography

- Headings: a clean geometric/grotesque sans (the app reads as system-sans/Inter-like). Bold weight for titles, medium for lower-thirds.
- Code/labels (queries, emails, agent names): a monospace (Consolas / SF Mono) — reuse it whenever you show a Boolean query or a predicted email, matching the app's `.mono`.
- Never more than two type sizes on screen at once.

Motion language (keep it consistent across all 8 intro segments)

Element	Spec
Title / lower-third in	translateY 12px→0 + opacity 0→1, **300ms ease-out**
Title / lower-third out	opacity 1→0, **200ms ease-in**
Click ripple	accent-orange circle, scale 0→1.6, opacity 0.5→0, **450ms**
Cursor	soft-glow dot, ~1.2× normal size, slight trail
Static hold	Ken Burns push-in 3–4% over the clip's length
Phase chip cross-fade	DISCOVER→GENERATE→APPROVE→TRACK, **250ms**
Screen-to-screen cut	hard cut on action, or 150ms dip-to-white for phase changes

Element	Spec
Reveal (variant cards, table rows)	stagger children **60ms** apart, each fades+rises 8px

The phase chip (top-left throughout)

A small pill that names the current phase, cross-fading as the story moves: `DISCOVER` (orange) → `GENERATE` (orange) → `APPROVE` (slate) → `TRACK` (slate). It gives the viewer a map — the Notion-onboarding feel of "you are here."

Lower-third pattern (for key actions)

When a click has an implication worth naming, drop a one-line lower-third using the `05-actions-and-implications.md` legend, e.g.:

- On **Generate**: 🔒 `drafts only — never auto-sends`
- On **Find People**: 🟠 `creates leads · predicted email`
- On **Remove**: 🔴 `removes lead + assets`

Keep them ≤5 words, monospace tag + short label, on screen ~2s.

End card (shared by intro outro)

- Background: ink `#0f172a`, soft orange bokeh drifting.
- PACOS wordmark with the **OS** in accent orange (matches the sidebar brand).
- Tagline: **"Run your job search like a system."**
- One CTA line (your choice): a URL, "Try the tour," or "Start with one lead."
- Hold 3s, gentle music resolve.

Accessibility / polish

- Captions: burn in the voiceover as subtitles (many watch muted). Style: off-white text, subtle dark scrim, bottom-center, same sans.
- Contrast: never put orange text on the off-white bg for anything small — use ink text and reserve orange for shapes/underlines.
- Motion restraint: one moving thing at a time. If the UI is animating (agent board), hold the camera still.
