PACOS — Screenshot Gallery (captured from the live app)

Real PNGs of every screen **and** the key click-interaction states, saved in `screenshots/`. Page shots were rendered with headless Chrome; the interaction states (forms open, chat conversation, import result) were driven with Playwright clicks. All at 1600×1000, from the running app with your real data.

Page states (reachable by URL)

File	Screen	Shows
`01-dashboard.png`	Dashboard	Stat row (429 leads), Generate panel, live Agent Status board
`02-leads.png`	Leads	Full roster table: Name · Title · Company · LinkedIn · Predicted Email · Domain · Assets · Status · Actions
`03-discovery-variants.png`	Discovery	7 Boolean search variants + the Auto-import "Find People" panel
`04-assets.png`	Assets	The four asset tabs; a no-email lead showing the "DM-only" skip
`05-approvals.png`	Approvals	Ready-to-send · Awaiting reply · Unmatched replies
`06-tracker.png`	Tracker	Whole-pipeline table, per-row status dropdown, Scan inbox
`07-chat.png`	Chat	Empty chat with the example prompt hint

Interaction states (button clicks — what opens what)

File	Trigger	Shows / implication
`08-add-from-jd-form.png`	Leads → **+ Add lead from JD**	The inline JD paste panel open, text pasted, **Parse JD** ready
`09-jd-proposal-review.png`	…→ **Parse JD**	The extracted **proposal** with editable fields — *"nothing is saved until you confirm"*
`10-add-manual-form.png`	Leads → **+ Add lead manually**	The manual lead form (all fields + persona)
`11-chat-proposal.png`	Chat → describe a person → **Send**	Assistant reply + editable **Proposed lead** card with **Add to leads.csv** & **Find people**
`12-find-people-paste.png`	Discovery → **Paste results instead**	The paste box with X-Ray HTML, **Import from pasted results** ready
`13-find-people-imported.png`	…→ **Import from pasted results**	Green **"2 lead(s) imported. See the Leads page."**
`14-leads-enriched.png`	Leads → search "Acme"	The imported leads with **predicted email + confidence chip** (not `unknown-1`)

File	Trigger	Shows / implication
`15-assets-generated.png`	Assets → generated lead	A populated draft (cold email/DM/cover letter/CV notes) with **Regenerate** / **Copy**

How these were produced (to re-capture or refresh)

Page shots (headless Chrome — one command each):

```
CHROME="/c/Program Files/Google/Chrome/Application/chrome.exe"
"$CHROME" --headless=new --disable-gpu --hide-scrollbars --force-device-scale-factor=1 \
  --window-size=1600,1000 --virtual-time-budget=6000 --run-all-compositor-stages-before-draw \
  --screenshot="screenshots/02-leads.png" "http://127.0.0.1:8000/leads"
```

Interaction shots need clicks — record them on camera per `06-demo-walkthrough.md`, or re-drive with a browser-automation tool. Interaction states with no stable URL (open forms, live chat) cannot be captured by a plain headless URL shot; they must be clicked into first, which is exactly what these Playwright-driven files did.

> Note: `08`–`15` used a throwaway **Acme Robotics** demo and a **Priya Shah** chat example; the demo leads were deleted afterward, so your pipeline is back to 429.
