PACOS — Kit ↔ Deck Crosswalk & Deck Corrections

How this tutorial kit lines up with `PACOS_How_To_Use.pptx` (the how-to script) and `PACOS_Interview_Deck.pptx`, and — importantly — **what in those decks is now out of date** relative to the shipped app.

Terminology is aligned

The kit uses the decks' / `CONTEXT.md` vocabulary exactly: **Lead, Asset, Operator, Tracker, Lead sheet, Search variant, Extractor, Personalization hook, Supervisor, Agent** (a component is only an "agent" if it makes a model call — the inbox monitor is a *process*, not an agent).

Kit → How-To deck slide map

Kit piece	How-To deck slide(s)
Intro S1–S2 (hook, two-phase idea)	1–3 (what it is, big picture)
Intro S3 (Build searches)	(new — see corrections) + Interview slide 7 (deterministic discovery)
Intro S4–S5 (Find People, enriched leads)	**not in decks — new feature**
Intro S6 (Generate, agent board)	4, 8 (pipeline; Dashboard tab)
Intro S7 (four drafts, Copy)	4, 9 (asset specs; Leads & Assets)
Intro S8 (Approve → Track)	10, 11 (Approvals; Tracker)
`05-actions-and-implications.md`	8–11, 17 (all six/seven tabs)
`05` golden rules block	2, 15 (golden rules)
`06-demo-walkthrough.md`	8–11 (the everyday rhythm, slide 15)
Chat proposal (`screenshots/11`)	17 (Chat — propose → confirm)

⚠ Deck corrections needed (decks lag the shipped app)

The decks were written before the **auto-enrichment ("Find People")** feature shipped. Three concrete fixes:

1. **Interview Deck · slide 10 ("Honest limits and what's next")** Lists **"Lead enrichment — to fill thin rows before generation runs"** under *What I'd build next*. **It is now built.** Move it from "next" to a shipped capability (or to slide 7 "Constraints/Discovery" as: "*Discovery auto-imports people from the X-Ray results and predicts a work email — deterministic, no scraping, no paid API.*").

2. **How-To Deck · slide 7 ("Running the App")** Says **"The six tabs, left to right … Dashboard → Leads → Assets → Approvals → Tracker → Chat."** The app now has **seven**: add **Discovery** at the end.

3. **How-To Deck · slide 9 & the Leads screen** The Leads table now shows **LinkedIn · Predicted Email · Confidence** columns, and Discovery has an **"Auto-import people / Find People"** panel. Worth a

bullet: "*Discovery → Find People collects LinkedIn profiles from your Google X-Ray results, predicts a likely work email (never marked verified), and creates leads.*"

> These are text/factual updates, not redesigns. The kit already reflects the corrected, shipped behavior — it's the decks that need the one-line refreshes above.

What is consistent and needs no change

- Golden rules, the pipeline (1 Personalization + 4 asset agents, ~5 calls/lead, shared hook, conditional email skip, review-hooks, resumable), the status flow (`pending → sent → replied → interested → interview → offer`, branch to `rejected`), `tracker.db` as source of truth, read-only Gmail, and Dry-run — all match the app and are carried into this kit as written in the decks.
