

 LV.0 → LV.1 · AI ENGINEER

The 8 A's that move you from **Level 0** → **1** AI engineer.

ANN, Agentic AI, AUC-ROC and more. **Plain-English** definitions, one swipe each, plus the agentic IDE everyone's talking about and six people to follow.

ARTIFICIAL NEURAL NETWORK • FOUNDATIONS

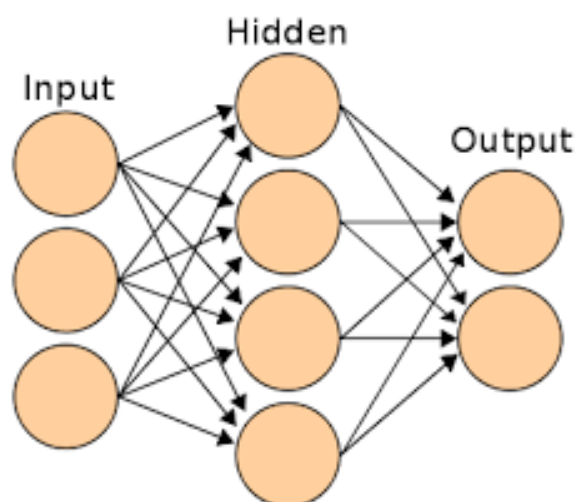

ANN

input • hidden • output

An Artificial Neural Network (ANN) is a computational model inspired by biological neurons. It consists of **interconnected layers of nodes** that learn patterns from data through weighted connections, enabling it to solve complex tasks like classification and prediction.

USED IN

- Deep learning
- Classification
- Prediction

LAYERED NEURONS

ACTIVATION FUNCTION • FOUNDATIONS

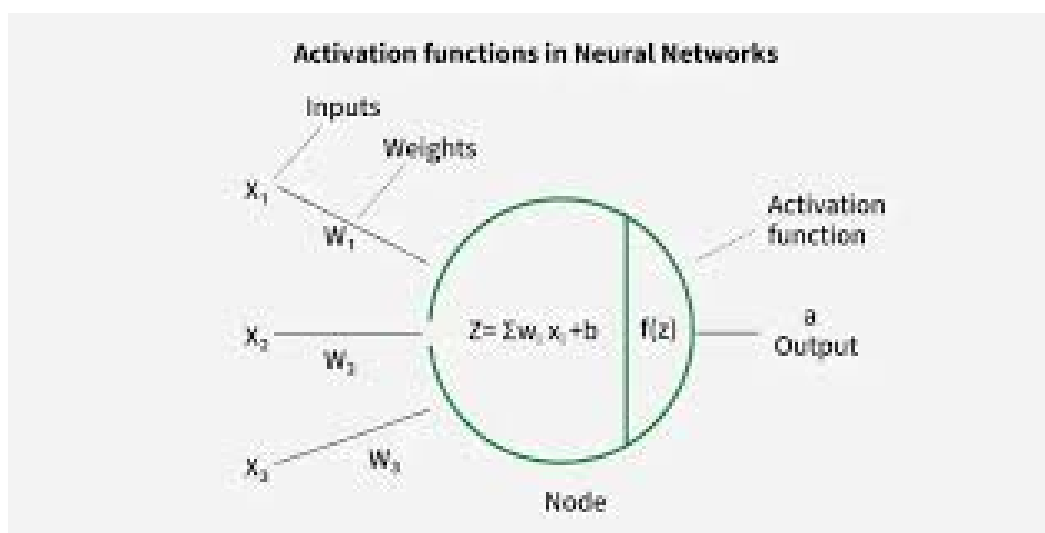

Activation

$z \rightarrow f(z) \rightarrow \text{output}$

An activation function is a mathematical operation in neural networks that **introduces non-linearity**, allowing the network to learn complex patterns. Common ones include ReLU, sigmoid, and tanh. Without them, deep networks would collapse into linear models.

USED IN

- Every deep net
- ReLU / Sigmoid
- Hidden layers

ADDS NON-LINEARITY

ALPHA • LEARNING RATE • TRAINING

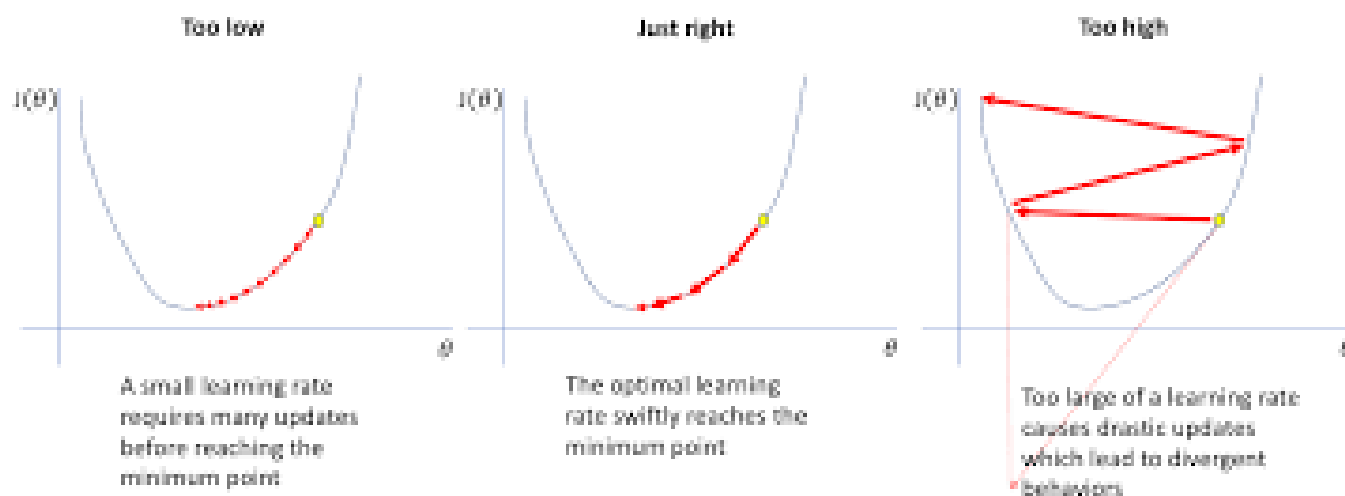

Alpha

step size per update

Alpha (learning rate) is a hyperparameter controlling **how much a neural network's weights update** during training. Higher alpha means faster learning but risks overshooting the optimal solution, while lower alpha offers stability but slower convergence.

USED IN

- Gradient descent
- Optimizers
- Hyperparameter tuning

TOO LOW • JUST RIGHT • TOO HIGH

AUTONOMOUS AGENT • AGENTS

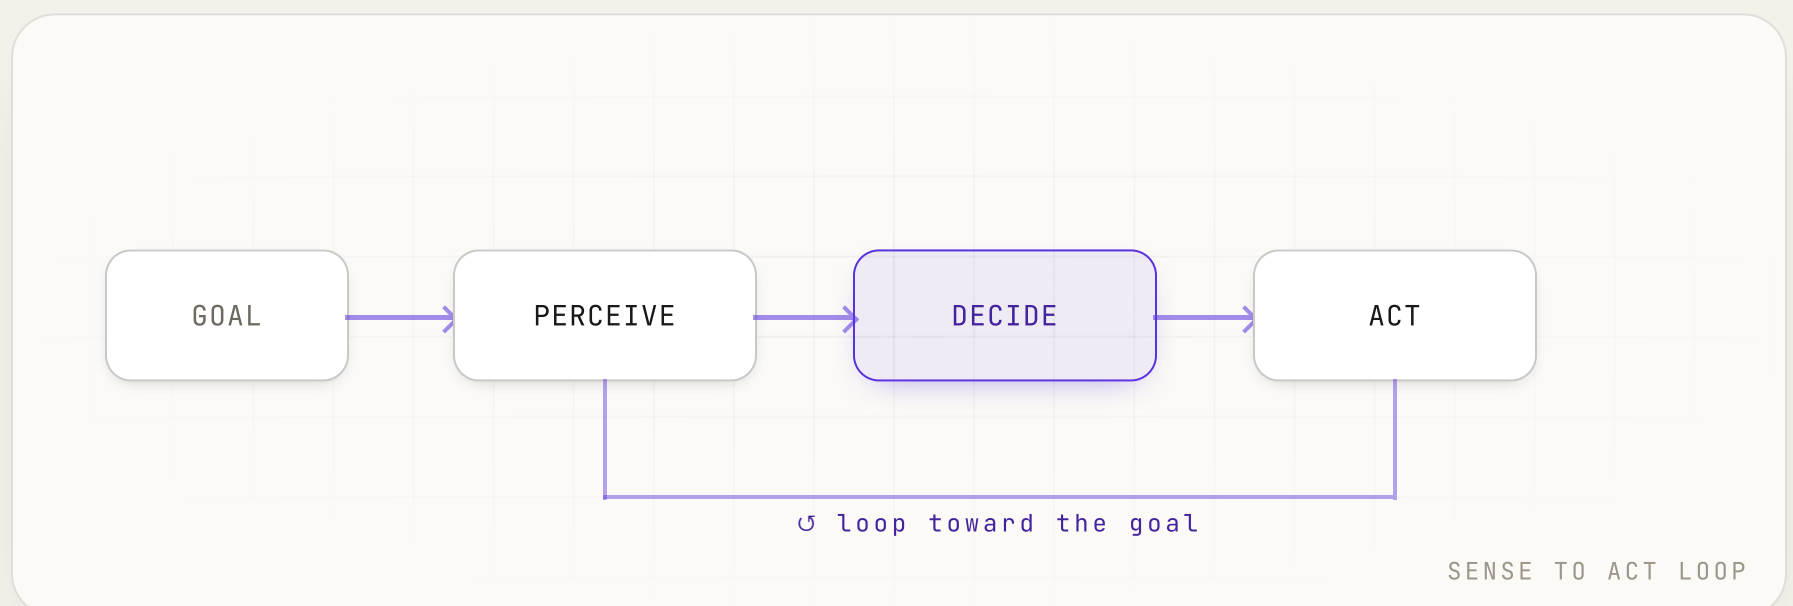

Agent

perceive • decide • act

An agent is an autonomous AI system that **perceives its environment, makes decisions, and takes actions** to achieve specific goals. Unlike passive tools, agents can plan multi-step tasks, adapt to feedback, and operate independently with minimal human intervention.

USED IN

- Tool use
- Automation
- Workflows

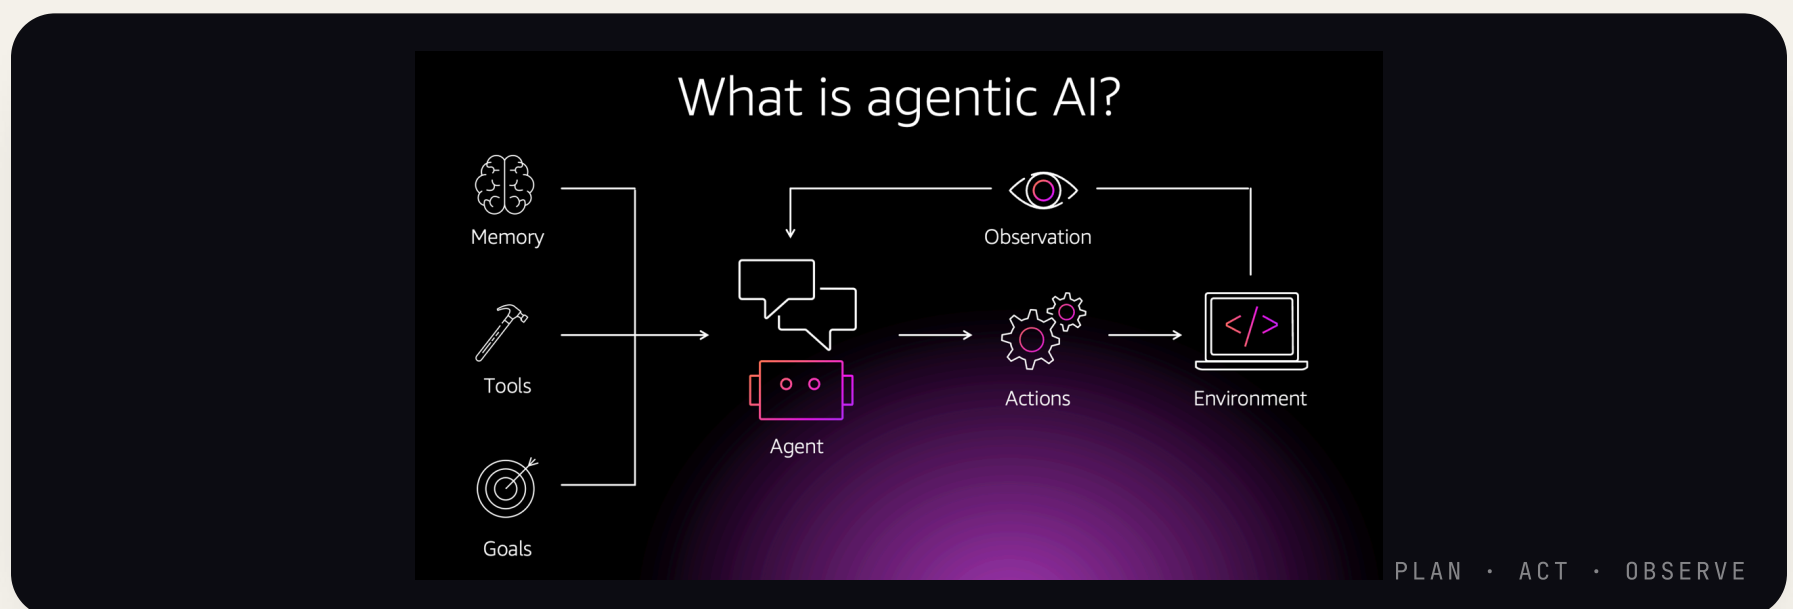

Agentic AI

plan • act • observe • adapt

Agentic AI refers to autonomous AI systems that can **plan, reason, and execute multi-step tasks** independently. Unlike passive language models, agentic AI perceives environments, makes decisions, takes actions, and adapts based on feedback to achieve goals.

USED IN

- Coding agents
- Research
- Ops automation

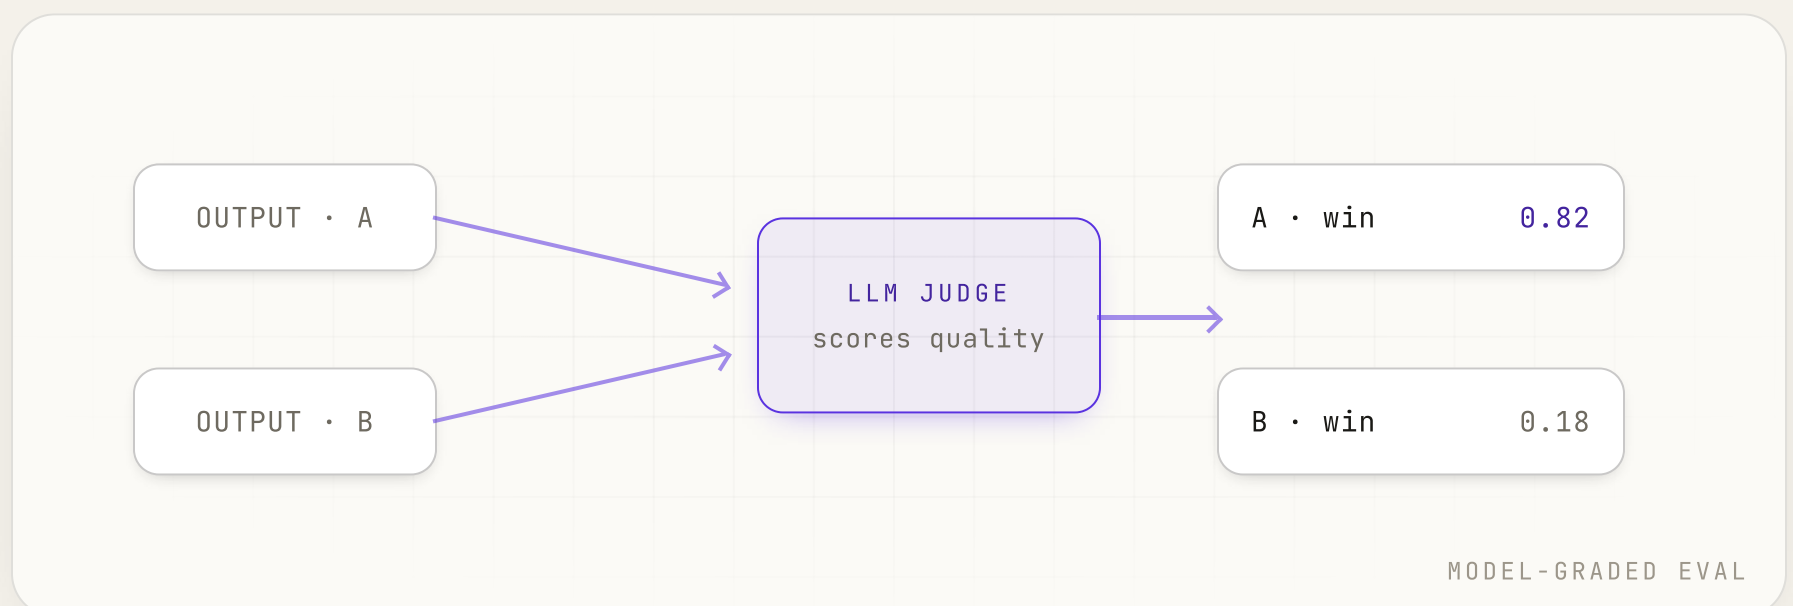

AI as a Judge

model scores model

AI as a Judge uses large language models to **evaluate and score outputs from other systems**, comparing quality, relevance, or correctness. It automates human-like judgment for tasks like ranking responses, grading essays, or assessing model outputs at scale.

USED IN

- Eval pipelines
- Response ranking
- Auto-grading

A/B TESTING • EVALUATION

A/B Test

split • measure • pick

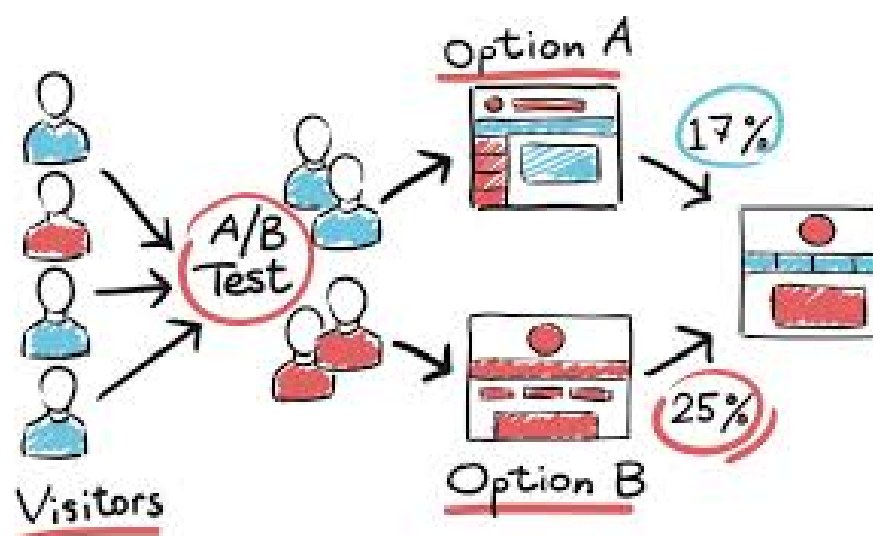

A/B testing compares two versions of something (A and B) by showing them to different groups and **measuring which performs better**. It's a data-driven way to optimize features, designs, or strategies based on real user behavior.

USED IN

• Product

• UX & design

• Growth

CONTROLLED EXPERIMENT

AUC-ROC • EVALUATION

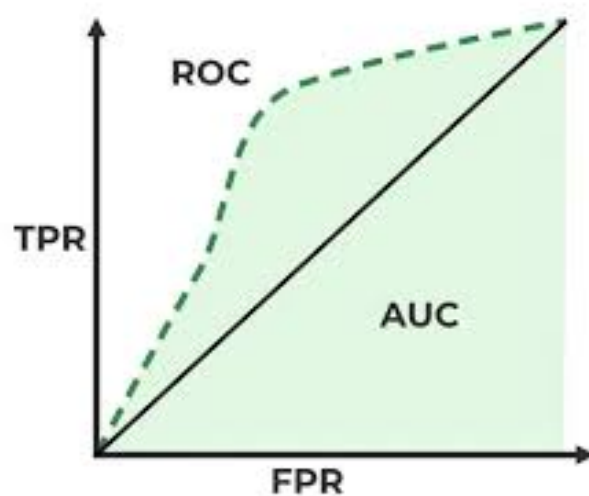

AUC-ROC

TPR vs FPR • area under curve

A single score for how well a classifier **separates classes** across every threshold, plotting true-positive rate against false-positive rate. A value of 1.0 is perfect, 0.5 is a coin flip.

USED IN

- Classifiers
- Model selection
- Imbalanced data

THRESHOLD-FREE METRIC

↓ UP NEXT • TOOL

Tool next.

Beyond the **8 A-words**: the agentic IDE that's rethinking how code gets written.

AGENTIC IDE

Antigravity

agent-first • editor • terminal • browser

Google Antigravity is an agent-first development platform where autonomous AI agents handle complex coding tasks across editor, terminal, and browser simultaneously. Agents plan and execute features end-to-end. Free for individuals with support for Gemini, Claude, and GPT models.

WHAT IT IS

An IDE built around autonomous coding agents.

IN AI STACKS

Agentic coding, planning, tool execution.

WHY DEVS USE IT

Agents handle multi-step tasks, not single edits.

PAIRS WITH

LLMs, terminals, browsers, your repo.

↓ UP NEXT • PEOPLE TO FOLLOW

Spotlight next.

Six **high-signal, low-noise** people behind the A-stack, from the father of AI to today's builders.

A

HIGH-SIGNAL, LOW-NOISE

Alan Turing

1912–1954 • father of AI

Alan Turing laid AI's foundation by formalising computation with the **Turing Machine** and asking "Can machines think?" His 1950 Turing Test became the field's first benchmark for machine intelligence, making him the undisputed father of AI.

KNOWN FOR

The Turing Machine and the Turing Test.

WHY HE MATTERS

Defined what it means for a machine to "think."

HIGH-SIGNAL, LOW-NOISE

Andrew Ng

X • @AndrewYNg

Andrew Ng is a globally recognized AI pioneer who founded [DeepLearning.AI](#), managing general partner at AI Fund, and co-founder of Coursera. With over 8 million learners trained, he has shaped AI education and enterprise adoption worldwide.

AI Engineer

YouTube • @aidotengineer

AI Engineer is a YouTube channel and educational platform focused on practical AI development. Through expert interviews, technical deep dives, and panel discussions with researchers, founders, and engineers, it helps practitioners stay current with advances in LLMs, AI agents, RAG, evaluation, and AI product development. The channel serves a global community of over one million AI professionals and bridges cutting-edge research with real-world engineering practice.
